

Recommendations Page

Written by Brad Westhafer

BASIC COURSE:

The system displays the Recommendation Page to the User. Then, the User clicks the Approve Button to approve the Recommendation Entry. The system displays the Approve Confirmation Prompt. The User confirms approving the recommendation. Then, the system adds the Recommendation Entry to the User Approved Recommendation List. Then, the system removes the Recommendation Entry from the Recommendation Queue. Then, the system invokes the Add Friend Use Case. Finally, the system displays an updated version of the Recommendation Page.

ALTERNATIVE COURSE:

The User dismisses a Recommendation Entry: The system displays the Dismiss Confirmation Prompt. Then, the User confirms the decision to dismiss the Recommendation Entry. Then, the system adds the Recommendation Entry to the User Dismissed Recommendation List. Then, the system removes the Recommendation Entry from the Recommendation Queue. Finally, the system displays an updated version of the Recommendation Page.

The Recommendation Queue is empty: The system sends a query to the AI Service. Then, the AI Service returns a new Recommendation Queue. Finally, the system displays an updated version of the Recommendation Page.

The User does not confirm on the Confirmation Prompt: The system closes the Confirmation Prompt and displays the Recommendation Page unchanged.

The User is not logged in: The system invokes the Login Use Case.
